Problem Statement:

You have two dataset one is train dataset and another is test dataset .
Firstly you have create a model on train dataset and then implement the model on test data set .

Task :
In problem you have predict the response of the user either he/she will by the policy or not and perform the following steps:

- **Step 1: Importing the Relevant Libraries**
- **Step 2: Reading Data**
- **Step 3: Data Inspection**
- **Step 4: Exploratory Data Analysis**
- **Step 5: Data Cleaning**
- **Step 6: Feature Engineering**
- **Step 7: Building Model**
- **Step 8: Implement model on test dataset**
